MARTIN, DIEHL HAROLD	2033675	08/09/2007	08/09/2007 09:32:56
Patient Name	MR#	Observation Date	Last Edited Date

Result Type:

Chest PA and Lateral

Reason For Exam:

SOB

REPORT OF EXAM::

Indication: Shortness of breath.

A right Mediport catheter is well-positioned. There are increased interstitial and airspace opacities seen within the lower lobes, likely due to lymphangitic carcinomatosis and resolving pneumonia seen on recent chest CT. Dense sclerosis of the upper thoracic vertebral body is noted, consistent with osseous metastasis. The cardiopericardial silhouette is within normal size limits.

Impression: Thoracic vertebral body metastasis and lymphangitic carcinomatosis.

Final Report

Interpreted by: Watts, Jubal R

Title: MD

Signed Date/Time: 08/09/07 09:32
